Daman's Trigger System: Move mountains of inventory at a fraction of the investment.

You may not be able to move all of the mountains for your business, but with Daman's *Trigger System*, you can level them.

Mountains of custom inventory, scrap inventory due to design changes, and suppliers' poor delivery performance are no longer obstacles for you with Daman's *Trigger System*. The system is a radical departure developed by Daman Products that obsoletes traditional inventory systems at a fraction of the investment.

Innovative, as well as easy to use, *The Trigger System* was created to provide an even greater way to eliminate overhead cost from a typical ordering process. The gained efficiency is now passed on by offering quantity bracket prices from custom quotes while maintaining very few, if any, parts in stock. There are no blanket orders required, no scheduled shipments, distributor inventory can be eliminated, and capital and floor space become available for other uses. Best of all, your cash flow improves.

The Trigger System is a Daman Product exclusive.

Daman's *Trigger System* was developed for distributors to gain faster response to design changes, and to eliminate forecasting and inventory management activities. Each of these benefits supports our commitment to accountability as we continue to lead the way in customer service, product quality and technical expertise. *To find out how this system works and discover more of Daman's innovative products and services, contact Gordon Weiler via email at gordonw@damanifolds.com or by calling toll free at 800-959-7841.*

The Trigger System Advantage.

- Improves supply chain effectiveness
- Inventory always available
- Capital/floor space available for other uses
