## Daman Extends Custom Capabilities for Larger Manifolds.

The FH-10800 CNC is a high-precision horizontal machine center that provides enhanced conformity with machining and part size capacity with near jig-bore accuracies.

The state-of-the-art equipment allows Daman to machine large manifolds (up to 2,000 pounds) complete at one station, eliminating the waste of moving a large piece of material from machine to machine required in the vintage shops now serving this market. The machine enhances Daman's position in the manifold market as a single-source, full-range manifold supplier.

Staying on the cutting edge of manifold technology is part of Daman's commitment to provide better solutions delivered with impeccable customer service.

For more information, visit us at Daman's interactive Web site that offers valuable information to help users understand

individual products, process innovations, and product service issues about the hydraulic manifold industry, customer solution information, and specific product applications and technologies. You can find Daman Products Company on the Web at [www.damanifolds.com](http://www.damanifolds.com).

### Large Manifold Details:

- Tooling to machine up to 100 mm DIN cavities.
- Block size capacity = 40" x 40" x 67".
- Weight limit 2000 pounds (Published).

- Larger manifolds can be built, depending on manifold layout details. Contact us to discuss any manifolds up to 4000 pounds.
